IVECO connectivity will help maximise your vehicle's uptime and productivity through a proactive approach with the Remote Assistance Service tool for remote diagnostics, teleservices and over-the-air software updates.

We help you get more time on the road by remotely monitoring your vehicle. If a warning about a component comes up, we receive a fault code alert and our connectivity managers will call you to advise on planning a stop at a workshop for the necessary service intervention.

CONTROL ROOM

Thanks to the connectivity and the faults alerting, IVECO can monitor your vehicle by anticipating unforeseen stops.

IVECO WEB API (APPLICATION PROGRAM INTERFACE)

This service is intended for those customers who want to create their own dashboards and reports, using the IVECO official vehicle data. It allows flexible data integration in the customer's own systems and facilitates the management of IVECO-generated data together with that of other brands' vehicles in a single tool.

Microsoft stores the data from IVECO vehicles in real time daily on a cloud that aggregates the information for each customer, then aggregates makes them available on to customers' systems. Additionally to the information already shared on the Smart Report (vehicle status, DSE, GPS, ...), we also show you idling data in order to reduce useless fuel consumption. You can chose one of the features below or all of them together:

- Geofencing
- DSE
- Vehicle Data

PAY PER USE

IVECO telematics technology allows you to optimise your costs. You pay the M&R contract at the subscription and, according to your actual mission and kilometers covered, you will only pay for the services you use and receive a refund for those that you did not. So you only pay for real time usage.

Try the new M&R PAY PER USE formula: it comes with the 2XL and 3XL Elements packages!
